

PRODUCT COMPARISON SHEET

Qooling is often compared with SharePoint because it is part of the MS Office package.

SharePoint promises to do lots of things for you, including back-office administration. You need to think through all the logic, approvals, questions, process flows, and everything else. It is simply a framework. SharePoint can work as a QMS, but it was never intended to be one.

Qooling is packed with all the tools and features you need to organize, structure, and maintain the QHSE of your organization.
